

Express Mail Label No. EL 782283089 US

US PTO Customer No. 25280

Case No. 5150

## WHAT IS CLAIMED IS:

An article comprising:

a base substrate;

a plurality of receiving loops extending from said base substrate, said receiving loops including at least one receiving filament;

a plurality of stiff loops extending from said base substrate, said stiff loops including at least one stiff filament having a denier per filament of at least about 10 denier per filament greater than the receiving filament of said receiving loops.

10

- 2. The article according to Claim 1, wherein said base substrate includes a first side and a second side, and wherein said receiving loops and said stiff loops extend from the first side of said base substrate.
- 15 3. The article according to Claim 2, wherein said receiving loops are adjacent to the stiff loops.
  - 4. The article according to Claim 2, wherein said receiving loops coincide with the stiff loops.

20

5. The article according to Claim 1, wherein said base substrate includes a first side and a second side, wherein said receiving loops are disposed on the first side of said base substrate, and wherein said stiff loops are disposed on the second side of said base substrate.

30

6. An article comprising:

a base substrate;

a plurality of receiving loops extending from said base substrate, said receiving loops including at least one receiving filament with a denier per filament of less than about 5;

Inventor: Morin et al. Express Mail Label No. EL 782283089 US

US PTO Customer No. 25280 Case No. 5150

a plurality of stiff loops extending from said base substrate, said stiff loops including at least one stiff filament with a denier per filament of greater than about 10.

7. An article comprising:

a base substrate;

a plurality of receiving filaments extending from said base substrate, said receiving filaments having a denier per filament of less than about 5;

a plurality of stiff filaments extending from said base substrate, said stiff loops including at least one stiff filament with a denier per filament of greater than about 10;

wherein said base substrate with said receiving filaments and said stifff loops thereon have an absorbency of at least about 2 grams of water per total gram weight.

8. The article according to Claim 7, wherein said receiving filaments extend from said base substrate in receiving loops, and wherein said stiff filaments extend from said base substrate in stiff loops.
